

## Description

F&S - Filtrieren und Separieren is the only German journal which reports about novel developments in the area of filtration and separation. The information is practically orientated. New processes, apparatus and machines and their applications are exclusively presented in F&S. Beside these, the development of the related market and changes in the companies also are considered. With this content, F&S reaches users of filtration & separation technologies in Germany and many neighbouring countries. Please also see our English language special edition, published yearly, "F&S-International Edition", which is distributed worldwide.
